

Apex Cyber Security Sphere

A fully managed IT security service that enables business owners and decision makers to stop thinking about cyber security

What is the Apex Cyber Security Sphere

The Apex Cyber Security Sphere is a fully managed IT security service that takes the burden of cybersecurity management off business owners' shoulders. Apex provides continuous monitoring, regular updates, and ongoing reviews of the latest cybersecurity technologies and strategies, ensuring that your business is always protected. Our expert team manages your entire cybersecurity infrastructure, proactively addressing threats and making adjustments as necessary to stay ahead of evolving risks.

How Does the Apex Cyber Security Sphere Work

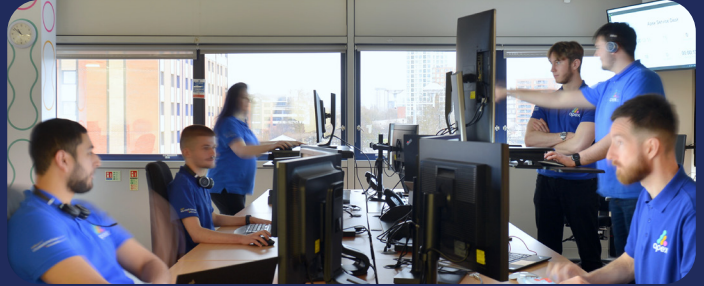

Businesses often lack the time, resources, and expertise to manage their cybersecurity effectively. Cyber threats are constantly evolving, and staying up-to-date with the latest security solutions, compliance regulations, and threat vectors requires continuous effort. Many business owners struggle to keep pace with these changes while also focusing on running their business, leaving them vulnerable to attacks, data breaches, and other security risks.

The Importance of the Apex Cyber Security Sphere

As cyber threats become more sophisticated, businesses can no longer rely on basic antivirus software or firewalls alone. A proactive, fully managed security service is critical to ensure that your business stays secure in the face of evolving threats. By allowing Apex to manage your cybersecurity, you gain peace of mind that your data and systems are secure, freeing you up to focus on running your business without worrying about security breaches or compliance issues.

The Outcome

With the Apex Cyber Security Sphere, customers benefit from a worry-free, fully managed cybersecurity solution. This service provides ongoing protection, regular updates to the security infrastructure, and proactive monitoring of your IT environment. Business owners can focus on growth and operations, knowing their cybersecurity is in the hands of professionals who are continually managing and improving their security posture. This results in enhanced protection and reduced risk of breaches.

What This Product Does:

Fully Managed Service: Apex handles all aspects of your cybersecurity, including monitoring, updates, and threat management, allowing you to focus on your core business activities.

Proactive Security Management: Our team of experts constantly monitors your environment for threats and adjusts your security measures as needed, without requiring your involvement.

Continuous Improvement: We regularly update and adapt the tools and technologies in the Cyber Security Sphere to ensure you're always using the most effective solutions. You don't have to worry about researching the latest security trends—Apex takes care of that for you.

Hands-Off Approach for Business Owners: Apex takes on the responsibility of managing cybersecurity, so business owners don't have to spend time reviewing or making decisions about their security infrastructure.

Professional Security Team: A dedicated team of cybersecurity experts is always working in the background to protect your business from threats, ensuring maximum protection.

What This Product Doesn't Do:

Doesn't Replace Internal Policies: While Apex manages your cybersecurity infrastructure, businesses still need to implement internal policies and train employees to ensure security at every level.

No Customisation for Niche Industries: Although the Cyber Security Sphere provides robust protection, highly specialised businesses with unique cybersecurity needs may require additional bespoke services not covered by the standard Sphere offering. Doesn't provide backup and BCDR which should be considered separately. Cyber Essentials and Security Audits are a separate service.

Does Not Eliminate the Need for User Training: Employees remain a critical part of the security posture. Phishing training is provided, but businesses must ensure employees are continually educated about evolving threats.

Doesn't Guarantee 100% Protection: While Apex provides comprehensive security management, no solution can guarantee complete protection from all potential cyber threats. Backup and BCDR Services should be considered separately. Although this can help towards Cyber Essentials Requirements, there are other elements that may be required to be compliant and Cyber Essentials and Security Audits should be considered separately. Internet Firewalls are separate to this also.
